

When the user selects a square foot box they are allowed to insert however many plants can be fitted into a square foot of garden space. When selecting the box they are taken to the plant list page.

The user will be allowed to choose plants to go into the garden design from here. When the user selects the plant a menu will slide out allowing them to read more about the plant, and either select the plant from the menu or return to plant selection.

When the user selects the plant, a menu will slide out to allow them to read more about the plant, and then select plant to add to garden design or return to plant selection screen.

The notes page will be accessible from the main garden page. Users will be able to select from a number of specific options such as "Insect", "Animal", "Weather", or "Other". The notes will be placed in these categories so users can refer back to them at any time.

Common Name: Corn
Scientific Name: Maize
Temperature range for planting: 85-90 F
Days to Maturity: 60-100 days
Spacing: 4-6 inches apart
Return to plant selection

There will be many more screens, however I feel that these are the most important to show for the Wireframe.
